A GOOD REASON.

Barre People Can Tell You Why It Is So.

Doan's Kidney Pills cure the cause of disease, and that is why the cure is always lasting. This remedy strengthens and tones up the kidneys, helping them to drive out of the body the liquid poisons that cause backache, headache and distressing kidney and urinary complaints. Barre people testify to permanent cures.

W. W. McAuley of 35 Seminary street, Barre, Vt., says: "I took all kinds of medicine said to be good for kidney trouble but without getting any noticeable relief. The pain in my left kidney was severe and I could not stoop to pick up anything from the floor without having sharp shooting pains in the small of my back. I was very restless nights and awoke mornings feeling tired and lame. Damp weather always made me feel worse and I finally became so bad I could only walk a short distance. It was then that I began using Doan's Kidney Pills, sold by E. A. Drown, the druggist, and they helped me from the first, relieving the pain in my back and helping me in every way. I have told many people what Doan's Kidney Pills did for me, and know of several who have used them on my recommendation with satisfactory results."

For sale by all dealers. Price 50 cents. Foster-McMillan Co., Buffalo, New York, sole agents for the United States. Remember the name—Doan's—and take no other.

MONTPELIER

P. J. Guare Returns From Tuberculosis Sanatorium, Much Improved.

P. J. Guare has returned from the Proctor sanatorium, Pittsford, where he has been receiving treatment for the past three months for a lung difficulty. He is much improved in health and was discharged as completely cured. Mr. Guare speaks very highly of the Proctor sanatorium. It is situated in one of the most beautiful spots in Vermont and the atmosphere that pervades it, even among the most discouraged patients, is one of determined cheerfulness. The doctor and nurses are untiring in their attendance upon each patient and numbers of cases have been discharged cured, while others are on the rapid road to recovery. Some wait too late before going to the institution for treatment and, of course, the best medical attendance and most cheerful surroundings cannot cure advanced cases.

The report in this city that Station Agent L. F. Angles of Montpelier Junction had deceased suddenly, leaving a week's pay behind in his haste is denied by Station Agent Gallagher of this city. He stated that Mr. Angles resigned his position and drew all his pay before leaving the job at the Junction, thus handing the report as false. Mr. Angles has accepted a position in Massachusetts and will take up his duties in a few days. Lucien Howe is filling the vacancy caused by his resignation at Montpelier Junction.

A WOMAN'S CELERY FARM.

A Crop That Yields Good Returns Near a City.

Miss Helen L. Bailey writes entertainingly of her experience in raising celery for the early New York market:

My home is twenty miles up the state and convenient to the railroad. All told I have less than three acres of land, and when I started in to earn my living there was a mortgage on the place and less than \$100 in my pocket. Celery has paid the mortgage on my home, has put money in the bank for me and has enabled me to educate a nephew and niece. My average crop of celery is 50,000 heads, and the average price is 40 cents a dozen. For

exten large heads I receive 60 cents a dozen. There isn't a month in the year when celery is not in demand in New York city, so there can be no doubt about getting good prices, provided the celery is up to the mark.

To raise celery to be marketed in June my work begins in January. The first step is to get good celery seed and sow it in boxes in a greenhouse. Under normal conditions it will require three weeks for celery seed to come up, though there have been occasions when I have forced it up within eight days, and the result was in every way satisfactory. As soon as the two little leaves appear on the plants the process of "pricking" begins and drags through February and March.

As regards the greenhouse, I would advise plenty of moisture and air, but not too much heat. At whatever temperature you begin always be careful to keep it from the time the seeds go in the ground until the plants are taken out to be set in the fields. When I have had occasion to force my seeds I have carried the forcing process straight on until the plants were ready to set out. As a rule, I put my seed in with the thermometer in the eighties and keep that temperature right straight through.

In April, as soon as the ground is warm enough to plow, the out of door work begins. After the ground is thoroughly plowed the fertilizer must be sown, and with a rake and harrow the surface must be made to look as smooth as velvet. The young plants are then taken from the greenhouse, not

too many at a time, and set out. After the setting out the raking begins and then the light against weeds. If there is any place where weeds grow faster than in a celery patch, I have never seen it. Of course it is because there is always so much more moisture in a celery patch than on land where other vegetables are grown. If the weeds ever get a start in a celery patch, the only thing to do is to pull them up by hand and haul to a pile and burn. If weeds don't grow on the ground, it is no use to plant celery.

Along about the first of June I begin to board the tallest of my celery. Boarding celery now takes the place of banking earth around it. In June it is impossible to bank celery with anything like satisfactory results. Even the boards will sometimes rot it before the blanching is begun. For this purpose I use ten inch boards ten feet long. These are carried into the patch and laid between the rows.

All in Harmony.
